ALL-ELECTRIC, PURE ADVENTURE

Jeep® Brand Battery Electric Vehicles (BEV) trade a traditional combustion engine for electric motors and run on pure electricity. A cutting-edge battery emits zero emissions while powering the vehicle into action.

THE BLUEPRINT FOR ALL-ELECTRIC ADVENTURE

THE PLATFORM

THE BATTERY

A PLATFORM FOR THE FUTURE

Whether battery electric or plug-in hybrid, the platform is the bedrock for electric vehicles—the foundation for the vehicle's body, drive unit and suspension.

components.

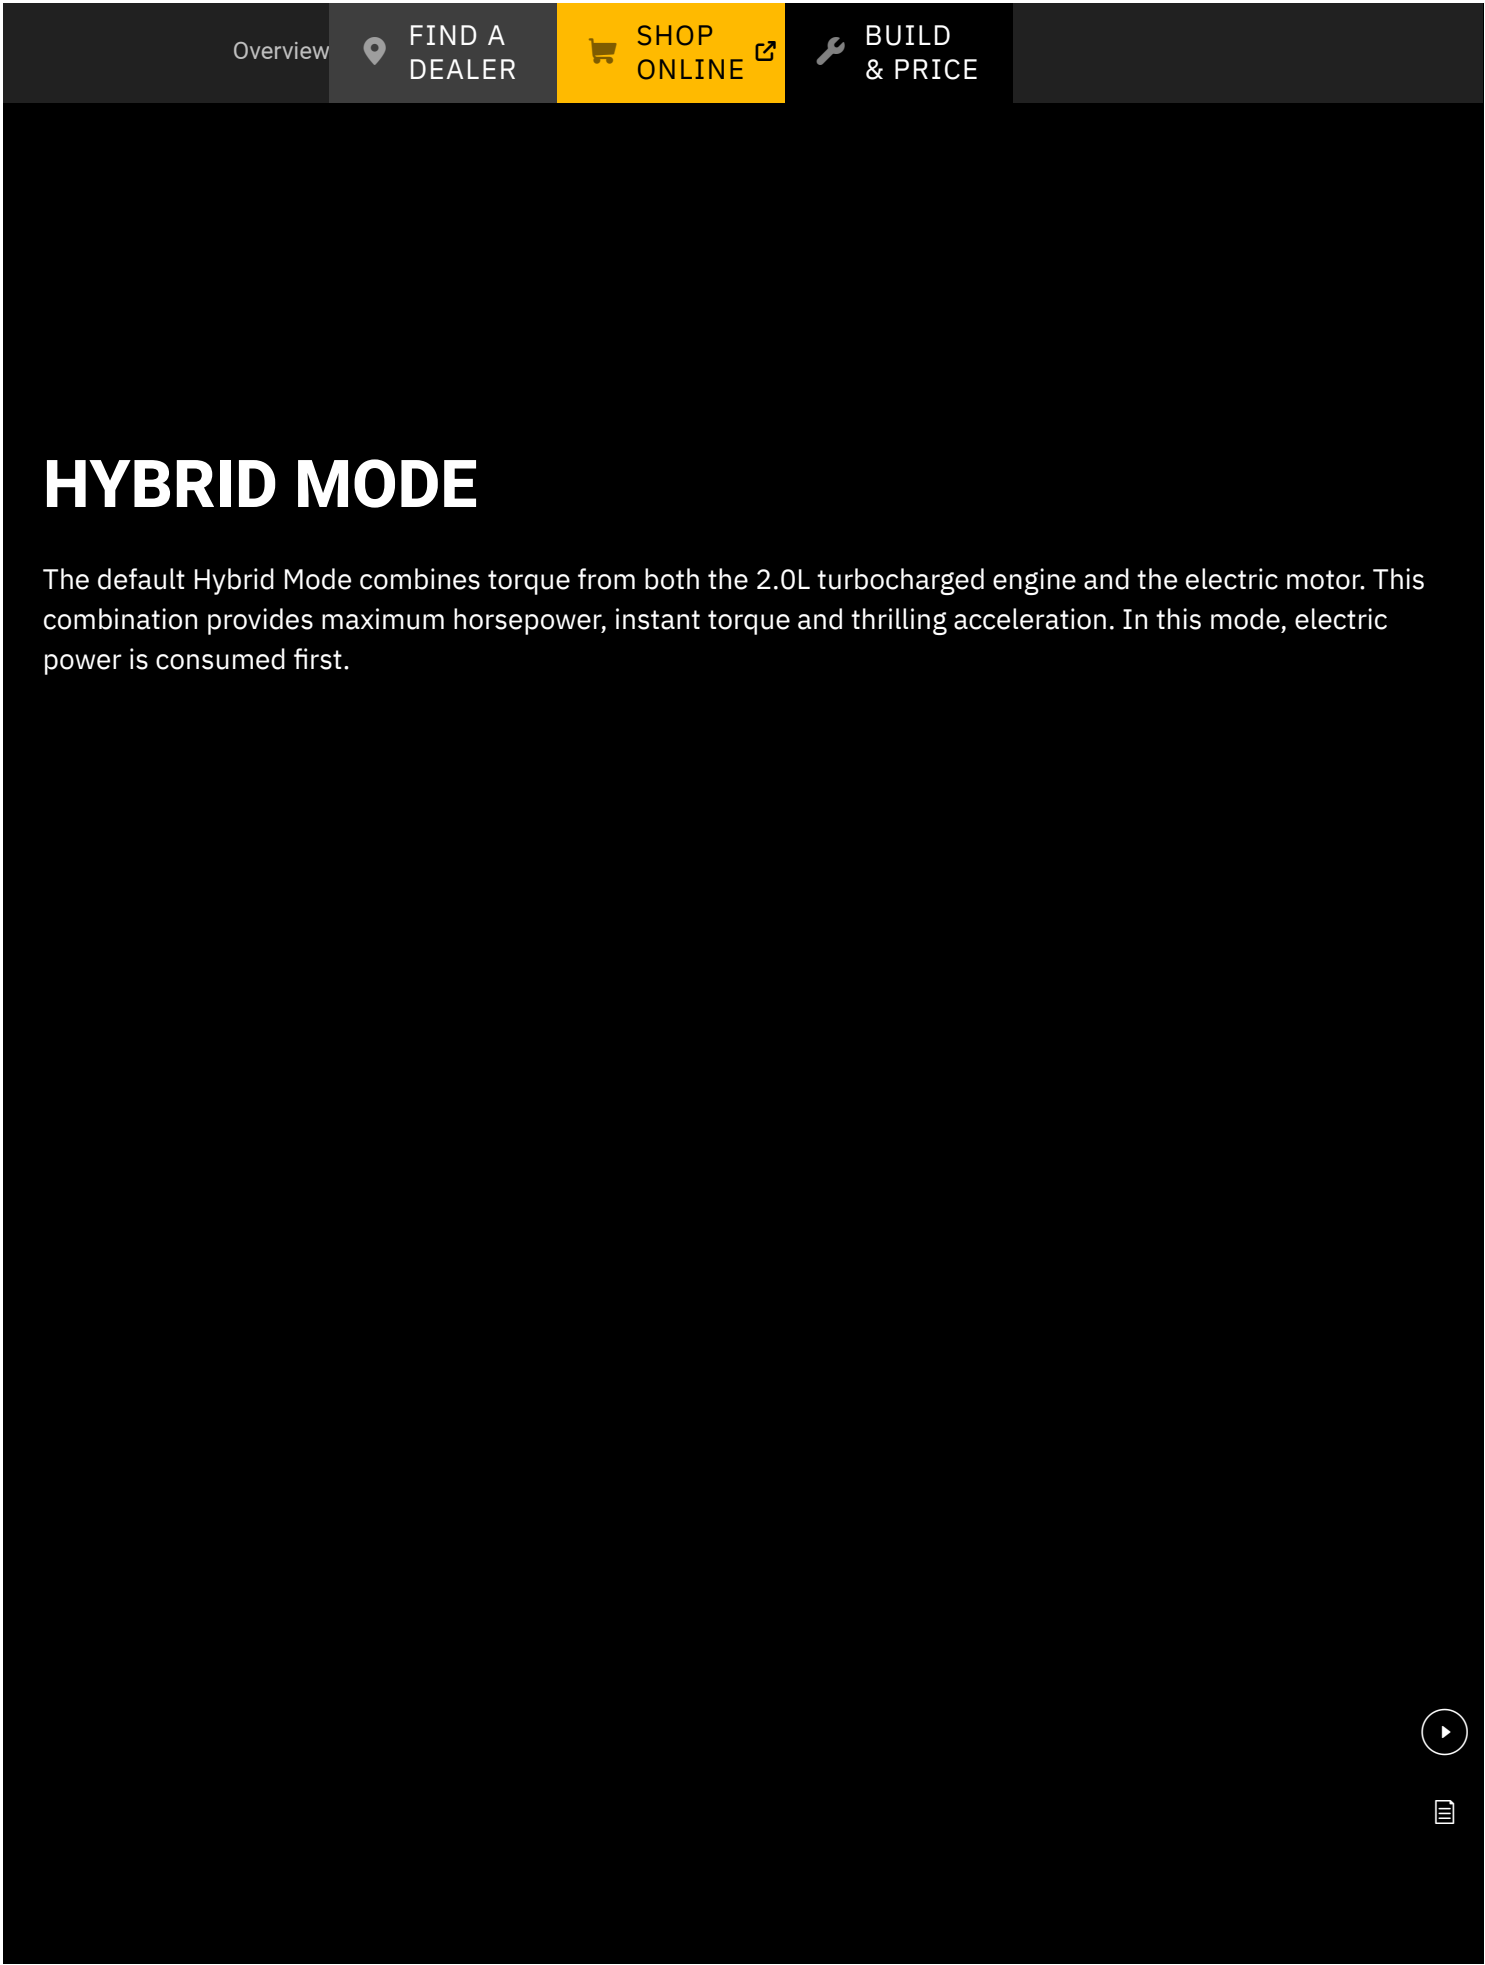

Do not attempt water fording unless depth is known and consistent with the vehicle's water fording rating in the Owner's Manual. Traversing water can cause damage that may not be covered by the new vehicle warranty. Always off road responsibly in approved areas.

YES, YOU CAN HAVE BOTH

Jeep® Brand plug-in hybrid technology pairs a traditional gas engine with an electric motor for dynamic power and range.

When in Electric Mode, Jeep 4xe plug-in hybrid vehicles offer near silent pure EV-driven performance. Plus, you can adjust the electric output to suit different driving conditions, recharge and do it all over again.

ELECTRIC MODE

When the battery has more than a 1% charge, it can run in Electric Mode. This allows for near-zero tailpipe emissions up to highway speeds. The vehicle can run in this mode for up to 21 miles¹ on Wrangler 4xe and up to 25 miles¹ on Grand Cherokee 4xe.

eSAVE MODE

eSave Mode prioritizes the 2.0L engine, saving battery charge for later use. When power demand is low, the engine shuts off. It can also be reconfigured to increase the battery charge as well.

REGENERATIVE BRAKING

This feature allows the battery to be charged when decelerating and braking. The Max Regeneration feature remaps the accelerator pedal to command more aggressive regeneration at low pedal positions. It allows you to slow the vehicle down without the brake pedal, but a complete stop always requires the brake pedal. It also stays selected until you turn it off.

RECHARGE

The battery can be fully charged in approximately 2 hours using an available Level 2 charger² (240-volt), or 12 hours using the included Level 1 charger (120-volt). With the ability to charge at home and work, you can enjoy the benefits of fully electric daily commutes.

EASY AT-HOME CHARGER INSTALLATION

Our partners at Qmerit make at-home available Level 2 charger³ installation simple. For most home configurations, it's as easy as providing some information about your home layout and electrical panel. The free estimate takes 5-10 minutes, and you decide when to move forward.
